## **My Job - High voltage electrician**

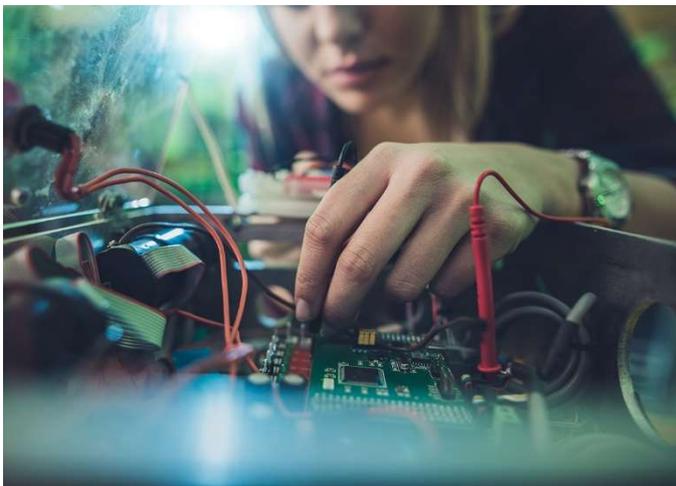

In the future I want to work as a high voltage electrician. There is a couple of reasons for this. Firstly, there is a growing demand for certified high voltage electrician because every modern electrical facility utilises high voltage power. Secondly, you can work in a lot of different sectors and environments. Some may sell this point short but being able to work in different environments allows you to control so much. For example, working offshore is completely different from working in a normal electrical company, different pay, different workdays, and different environment. Thirdly, it pays well. It is no secret that there is a lot of money in working as an electrician nowadays, especially if you are good. This on top of the previous two points make high voltage electrician a desirable occupation.

## **My Job - Service electrician**

When I get older and start to work, I wish to work as a service electrician. The reason for this is that I think I would like the way a service electrician works and do things. I like how they drive around in these “pizza racers” and drive to people's houses and troubleshoot electrical problems and fix cables and wirings. I also really like to set up lights and especially smart lighting. So I think I might end up as a service electrician when

I am going to search for a job.

## **My Job - Production electrician**

A production electrician works with production, mounting and reparation of electronic circuits. The work mostly involves soldering components on a circuit board, a big part is also troubleshooting and programming circuits. Some production electrician also do quality checks and making sure any circuits are working.
